Here are some tips & tricks to facilitate your connection:

1) Before proceeding, check that you are currently connected to the Internet and that this connection is stable. If possible, prefer a wired connection over a Wi-Fi connection.

2) Update Java to the latest version [https://java.com/download](https://java.com/download) and configure as follow:
   - Menu Start / Control Panel
   - Double click on the Java Icon
   - In the “Security” tab, click on “Edit site list”, click on "Add” and enter https://myremote.ec.europa.eu
   - Validate the screens with “OK”

3) Use the appropriate browser:
   - Microsoft Internet Explorer & Mozilla Firefox are fine
   - Goggle Chrome may not work
   - Microsoft Edge does not work

4) Check that your browser does not block pop-ups.
   - With Internet Explorer, under Internet Options / Privacy / Turn on Pop-up Blocker / Settings / Address of website to allow, add https://myremote.ec.europa.eu/

5) To connect to the EC, the installation of a “software client” is performed automatically during your first connection. If this installation fails, please check that your anti-virus or any other security software does not prevent this installation. If so, please deactivate temporarily your security software, connect to the EC and disconnect then reactivate your security software.

Please be aware that:

1) IT Support for private devices can only be provided on a "best effort" basis as each configuration is different and may not react as expected.

2) The Commission couldn’t be held responsible for any damage or loss resulting from the access to the EC network.
1. How to connect?

From the Internet browser, enter the following URL (pay attention to the "s" in "https")

https://myremote.ec.europa.eu

In the "MyRemote Services" page

In the box "I have a private device"

Click "Connect"

The following pop-up appears to let you choose the appropriate authentication method.

If you are not familiar with them, consult the separate documentation "How to authenticate remotely to connect to the EC IT environment"
Once authenticated, you are redirected to the following webpage.

There are now several possibilities:

- You can connect to any of the web applications available here (SYSPER, Webmail, etc.)

- Or you can click on “ITIC’s Windows 7 Terminal server” if you need to get access to your network drives and applications like Outlook, Word, Excel, etc.

2. Extra information if you click on “ITIC’s Windows 7 Terminal server”

You may be prompted to install a new version of the "Juniper Client". It’s free and you only need to install it once for all but to do so you need administrator privilege on the computer (ask the computer’s owner for more details).

Please accept the software licence and validate the different screens.

Your login is displayed.

Enter your Windows password (the one you use to start your computer in the EC)

Click on OK
At this stage a legal notice is displayed.

Click on OK to accept the conditions.

After a few minutes, your "Remote Desktop" is displayed with your familiar icons.

Note that:

- Your Outlook environment is ready (with your personal folders, your functional mailboxes if you use some, SECEM if you have it)

- The network drives are available (H, O, P, U, etc.)

- Regarding applications:
  * Corporate applications are available
  * Virtual applications are available
  * Applications that were installed locally on your EC computer are NOT available

When you have finished:
- Open the start menu
- Click on "Log off"
3. How to disconnect properly?

Why is it so important to disconnect properly?

If you left your computer unattended with a session still open, you are accountable for everything that is done using your credentials (token and/or login).

Back to this screen it’s very important to Click on “Disconnect / Déconnexion”

Wait for this screen to appear (confirming that your session as been terminated).

Close your Internet browser completely by closing the browser window (closing your current tab is not enough).

When in doubt, shutdown the computer.
